## Front-end developer

I'm Front-end developer looking for a job in upcoming company. I'm not afraid of hard tasks and studying something new. I like huge tasks, which I can deconstruct into small and familiar ones, that I can solve without any difficulties. I can study new technologies, which is necessary for the new project. Also I'm interested in Back-end development and want to become a full-stack developer in the near future.

## Experience

### 2021 - present

Company

Engineer-programmer

JavaScript, HTML&CSS, C#, MySql,

Development the web-site of company. Development some useful tools for upgrading work and making some simple work with help of applications. During this work, i learn how to change a big part of the result in the last moment if the customer need something new in his project.

## About me

### Just a few words about my advantages

I have successfully coordinate the technical task with the customer in a short time, who made the site from scratch. According to the results of the work, the customer didn't have any complaints.

I can change my work schedule depending on the workload in the project. For example i can stay late at work if the project need my participation.

I have a good knowledge of HTML, CSS, JavaScript, TypeScript, React.

I can work with Figma.

I have experience in work with API, small library like Styled Components, Formik and Yup.

Also i have experience in work with Gulp, Webpack.
